employment

community engineer @ [hack club](#)

april - october 2022

- designed and developed projects intended to inspire an online community of technical teenagers, including [8-ball](#), a language model-based chatbot, and [simple-stable-diffusion](#), a colab for getting stable diffusion running within minutes
- gave extensive support to and engaged in conversation with teens passionate about coding
- led moderation for an online community of over 10,000 teens

projects

pnppc/dictator

a collaboratively written discord bot that consists of various games and toys, including a virtual economy and language model-based commands. originally written in python, then rewritten in haskell

celeste.exposed

my personal website, which primarily consists of a variety of small toys and utilities, such as:

- [celeste.exposed/poll](#), which abuses player cards to allow for twitter polls with >4 options
- a “random fun fact” generator that pulls random triples from wikidata
- [celeste.exposed/alignment](#), a random alignment chart generator
- (once had a css randomizer that used a backdoor i wrote to copilot; since then copilot has changed their internal api and i haven’t fixed the feature)

birdwatch

a bare-bones but fast twitter scraping library

skills

i am most comfortable with python and haskell. i am also decent with rust and js/ts

i have the most experience writing discord/slack/twitter/spotify bots and cli/tui apps; i’m also relatively comfortable with web development, especially backend
